Huawei y9 prime 2019 camera guide

Huawei generally doesn't release a lot of smartphones in a year, at least not xiaomi, in the kind of face brands like Samsung or Realme. The company has so far launched the Huawei P30 series and Y9 (2019) in India. On Thursday, Huawei added Y9 Prime 2019 to its portfolio of mobile phones in India. To compete with the latest phones such as Realme X (review), Oppo K3 and Galaxy A50 (review), Huawei needed a phone with trendy features such as a pop-up camera and a triple rear camera, both priced at Rs 15,990 in India for Y9 Prime 2019. Huawei Y9 Prime 2019. It comes in one 4GB+ 128GB storage configuration and will be available on Amazon India from August 7. Huawei also plans to sell Y9 Prime 2019 through retail stores with the help of Micromax after the two brands recently announced a partnership. On the sidelines of the launch event, I spent a short time with Y9 Prime 2019 here is my initial exposure. The moment you hold the Y9 Prime, the phone is compact and slim despite the company's claims that it can feel its size and weight. The handset measures 163.5x77.3x8.8mm and weighs 196.8 grams, which is slightly thicker and thicker than the realme X says. However, considering the fact that Y9 Prime 2019 offers larger batteries and larger displays, it seems reasonable. The Y9 Prime features a 3D panel that is plastic on the back. It doesn't feel too premium when you grab it and feel the rear panel, but the phone makes up for it by offering a unique dual-tone finish on the back that reminds you of one of the pixel phones. That said, it doesn't appear to be pronounced or pronounced in Y9 Prime 2019. The phone is available in emerald green and sapphire blue. The green color model checked out provides two shades divided just below the fingerprint sensor. Indoors, it was difficult to distinguish between the two shades under average lighting, and I feel the rendering is more defining than the actual product. Curved panels will make it easier to hold your phone and glossy panels will attract some stains along the way. The rear-mounted fingerprint sensor is well positioned and easy to reach. On the right side of the frame is the power button and volume key, which are well placed again. The Y9 Prime 2019 features a Type-C port at the bottom, a 3.5mm headphone jack and a single-bottom launch speaker. Coming on display, the Y9 Prime features an edge-to-edge screen with a slim bezel at the top and sides. Besides the chin, there's nothing distracting from looking at the screen. There are no notch or hole punch cutouts because the selfie camera has moved to a pop-up mechanism. Huawei Y9 Prime offers a 6.59-inch FHD + LCD full-view display, 91% on-screen and 391 ppi. The display looks bright enough in the room, but the room was poorly lit. Color reproduction is decent, but you won't find it as saturated or deep as you would be. It is displayed on realme X or Galaxy A50. The device was not able to test how the display handled media content and games in a limited time. Huawei is calling Y9 Prime 2019 a pop-up king that looks too much. There were already some pop-up camera phones released in India in the segment, so Huawei is now kind of playing catch-up. The pop-up mechanism takes about a second to rise, which is very fast, but not the fastest we've ever seen. For example, Realme X's pop-up camera increases in about 0.7 seconds. Y9 Prime 2019 is powered by a 2.2Ghz octa-core Kirin 710F chipset paired with 4GBRAM. The Kirin 710F is similar to the regular Kirin 710, but can provide slightly better power efficiency. It would have been nice to see not only the 6GB or 8GB RAM option, but Huawei just keeps it at 4GB and it will be interesting to see if it is enough for daily use. Unfortunately, we can only find it after spending more time with the device. The triple camera settings for Y9 Prime 2019 are an upgrade to the dual cameras of Y9 (2019). In addition to a 16-megapixel main camera and a 2-megapixel depth sensor, the Y9 Prime 2019 features an 8-megapixel ultra-wide-angle camera that can capture larger subjects such as monuments, buildings or large numbers of people. The main camera supports AI scene detection and features a 6P lens to capture brighter photos. The front camera is a 16-megapixel selfie sensor that comes with AI scene detection. Finally, Y9 Prime 2019 has a 4,000 mAh battery, which is good enough to last all day and should have some batteries depending on usage. However, we are not able to test battery performance on our limited time with the device. Sadly, Y9 Prime 2019 doesn't support fast charging, disappointing considering phones like Realme X, Realme 3 Pro, Oppo K3 and Vivo Z1 Pro offer faster charging at similar or lower prices. Based on its short interaction with Y9 Prime 2019, the phone looks like a pretty solid update to Y9 (2019) from earlier this year. It looks like a 2019 smartphone with notched display, pop-up selfie camera and triple rear camera. It also seems to be a decent mid-range processor for what it is for with a large battery to back it up. Whether the company has implemented these features well will only be known after spending more time on the phone. For now, Y9 Prime 2019 seems to go well with the Realme X, Oppo K3 and Galaxy A50.
